

AirBerth Boat Lifts raises our emergency services

Gold Coast-based company AirBerth Boat Lifts says it has greatly assisted numerous commercial organisations around the world by providing an effective solution that streamlines vessel downtime and the inefficiencies of regulatory maintenance.

Recently, the Manly QF2 and Noosa QF5 Flotillas of the Australian Volunteer Coast Guard acquired an AirBerth Boat Lift each for their patrol vessels to enhance daily operations.

“The implication of the AirBerth into the day-to-day operations for both Manly QF2 and Noosa QF5 has been an overwhelming success,” said the company in a press release.

“It has allowed for more productive time and greatly reduced ongoing maintenance costs, which in turn has resulted in the funds saved to be diverted

to other operational costs like gear and fuel. Above all, the investment of an AirBerth has most importantly enabled the vessels to maintain a high performance,” AirBerth added.

The manufacturer said the AirBerth Boat Lift is constructed of High Density Polyethylene (HDPE) materials which are non-corrosive and have the highest UV stability.

The product’s durable materials and advanced engineering are said to equate to the product having an estimated 50-plus years lifespan.

There are nine standard models in the AirBerth range, from 2300kg up to 10,000kg, engineered to suit both monohull planing and power catamarans.
