

AirBerth makes boat storage light work

Gold Coast company AirBerth has designed the perfect storage solution and protection for boats worldwide, which also enables boat owners to be on the water, enjoying the boating lifestyle, at a moment's notice.

AirBerth boat lifts are simply designed and engineered, so whether you're a novice or an experienced boatie, they're a breeze to operate. It's just a matter of pointing the nose between the two mooring guides. Your boat will centre itself in even the most testing conditions.

The AirBerth is ideal for marina boat storage. Using mooring ropes instead of hard mounting and permanent brackets, it's convenient and flexible for boat owners and doesn't stress or damage the marina structure. And the range fits well within most standard berth sizes. There are nine standard AirBerth models, ranging from 1500kg to 10,000kg, suitable for both mono-hull planing craft and power catamarans.

Made of non-corrosive, UV-stable high-density polyethylene (HDPE), the cleverly engineered AirBerth has an estimated lifespan of 50-plus years.

National marketing manager Justin Lye says customers report "they are achieving their ultimate goal and getting out of water with ease and importantly more often".

Justin says many boat owners, disillusioned with the hassles and costs associated with maintenance, are turning to the AirBerth Boat Lift "to prolong the boat's residual value and performance long-term", and to enhance their enjoyment of the boating lifestyle.

"Recognised as the premium boat lift in the marketplace", AirBerths supply private owners and organisations worldwide, such as the US Navy,

AirBerth at The Spit,
d'Albora Marina

US Coastguard, Malaysian Fire and Rescue Service, Australian Customs, Port of Brisbane Authority and Queensland Volunteer Marine Rescue.
