

**Phuket** - The first **Airberth** to arrive in Thailand has been raised at Phuket Yacht Haven Marina. The Airberth is ideal for keeping small to medium boats out of the water while moored in a marina or private jetty. Use of the Airberth reduces maintenance costs in regard to antifouling, corrosion, damage to sterndrives and outboards. Underwater maintenance normally requiring to haul a boat can now be done more cost effectively. The Airberth is ideal for keeping your boat in good shape and reducing upkeep. Sizes range from 1,500kg to 10,000kg, with a lifting capacity of 4.8-13.8m in length.
