

C520 Airberth with a Cobra Cat 9m moored in Durban, South Africa

## Airberth boat lifts – moving forward with international expansion

Gold Coast based AirBerth Boat Lifts, the market leader in the floating boat lift segment have further expansion plans on the horizon throughout this financial year and beyond.

On the back of their recent successful expansion into the South African market and upcoming expansion plans involving emerging markets like India and South America, the company is well positioned to meet the increasing demand of boat owners.

“We are experiencing solid growth through our international distribution network as boat owners seek out alternatives to anti-fouling to enhance their boating experience. Boat owners of today want convenience, they are also much more focused on solutions that are friendly to the marine environment” said Marketing Manager Justin Lye.

The AirBerth system is constructed of High Density Polyethylene (HDPE) materials which are non corrosive and have the highest UV stability. The system enables the boat owner to eliminate use of anti-fouling bottom paint. In addition the product's durable materials and advanced engineering equate to the product having an estimated 50 plus year lifespan.

There are 9 standard models in the AirBerth range, capable of lifting boats weighing from 2,300kg up to 15,000kg, models are engineered to suit both mono-hull planning and power catamarans.
